Product: Pegasus S2/S3

Title: LED Light Fitment

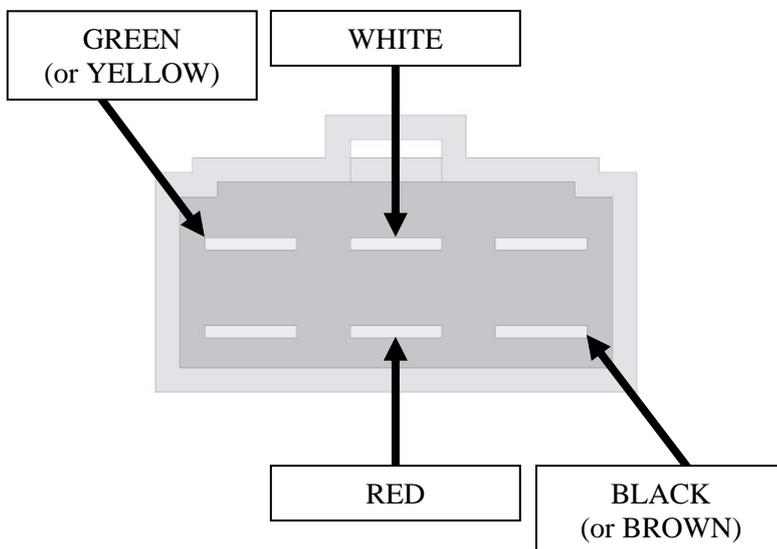

SAFETY! Before attempting to make any adjustments or carry out maintenance on the mower, review the hazard identification table (section 3a of your Operator Manual) and take all necessary precautions.

Trimax Pegasus Series 3 has superseded the Series 2, however, some parts are interchangeable between the two models.

On the Pegasus Series 3, the brake and indicator lights on the mudguard have been superseded by LED unit.

For spare parts purposes, the new LED can be retro-fitted to either mudguard on a Pegasus Series 2 by using the diagrams on page 1 and 2, there are two types of Mudguard used on series 2, one has a Stainless Steel Mount for the Lights and the other has a moulded mount for the Lights. Both types are detailed below.

Shown opposite is the terminal layout for fitting the plastic plug to the Tail Light terminals.

The image opposite is from the **REAR** of the Plug! This is the side that the terminals are fitted into!

This wiring layout suits left **AND** right hand Tail Lights.

Note:

Ensure that the terminals are fitted as shown opposite or the Lights will not function correctly!
